

Aircomatic Machine

Hansens Auto is able to remove the bacteria created by dust and pollen entering the air conditioning system of your vehicle using our Wynn's Aircomatic machine.

When the air conditioning is switched on these micro organisms are blown into the passenger compartment and inhaled by it's passengers.

Using ultrasonic technology, Airco Clean liquid is atomised into the HVAC system to kill the mould and bacteria which grows on the evaporator surface.

Ensure your passengers are sitting in a safe and pleasant environment inside the car interior.
